

In September Shutdown of 2021, the staff suspected a leak in the hot tub lines. A leak detector company was secured to identify the leaks in December of 2021. The team worked hand in hand with a repair team in March of 2022 to repair all the leaks identified.

The repairs stopped when contractors discovered further damage to the basin. This damage to the concrete and substrate was much more extensive than even our worst estimates.

# Hot Tub

## Update

The project is now a complete replacement of the hot tub, led by the town engineers and administration. They will come up with a plan to replace the entire basin and plumbing, as well as a timeline.

As of right now, the team is hoping to complete the demolition of the existing hot tub during September Shutdown, with installation of a new system planned for the months to come.
